

## Make a Model Straw Glider

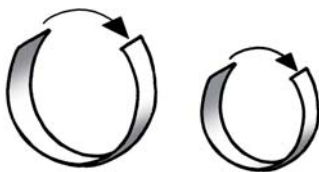

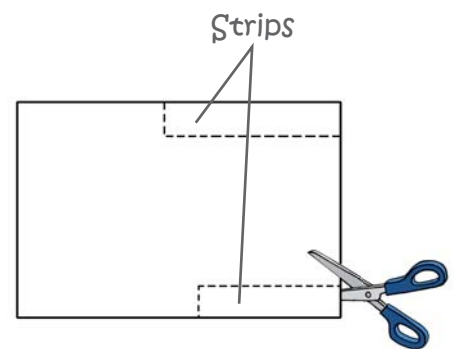

Make a straw glider and put on your very own air show. Ask an adult to help you.

### What you will need:

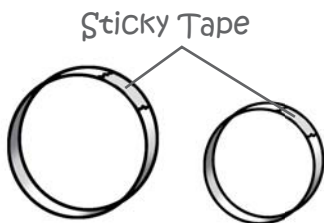

- 📏 ruler and pencil
- 📄 1 piece of A4 paper
- 🥤 1 drinking straw
- 📎 sticky tape

### What to do:

1. Take your ruler and pencil and mark two strips on the piece of paper. One strip needs to be 2cm wide and 12cm long. The other strip needs to be 2cm wide and 16cm long.

2. Take your scissors and carefully cut out the two strips of paper along the lines you have drawn.

3. Curl each strip into a circle and join the ends with a piece of sticky tape. You will then have one small paper circle and one large paper circle. These are the wings of your straw glider.

4. Use sticky tape to attach the circles to each end of the straw as shown.

5. Your straw glider is now ready to fly. Point your straw glider with the small circle at the front and throw it as hard as you can!
