WINDOWS 98 / NT / 2000 / XP

These instructions outline the installation process for the games files that you have downloaded for Windows 98, NT, 2000 and XP. The images in these instructions have been captured from a computer running Windows 2000. The installation process is exactly the same for Windows 98, NT and XP.

The file that you will or have downloaded to your computer is a “zip” file and contains a copy of these instructions and the selected games file.

Download the .zip file to your computer.

Using a utility such as WinZip (www.winzip.com) unzip and extract the contents of the zip file to a folder of your choosing on your computer's hard disk.

This software does not install any DLLs or modify your system in any way. You can play the game immediately without restarting.

Double click the extracted file, (or use the right mouse button and select Open) to start the Game.
